PRIVATE LEGAL DOCUMENT TRIAGE

Zero-Day Hackathon 2026 • Privacy-First Legal Intelligence with Sarvam.ai Indian Voice

1. EXECUTIVE SUMMARY & PROBLEM STATEMENT

Over 85% of citizens in India sign rental and employment contracts without reading or understanding dense legal jargon. Critical traps—such as 12-month lock-in periods, unilateral security deposit forfeiture, and unreasonable termination rights—cause substantial financial distress. Existing generative AI solutions (OpenAI ChatGPT, Anthropic Claude) pose severe privacy violations by sending confidential personal data, salary figures, and residential addresses to US-based cloud servers. **Private Legal Document Triage** solves this with a 100% on-device, privacy-preserving legal intelligence engine equipped with proactive risk scoring, negotiation counter-offers, calendar reminders, and studio-grade Indian voice synthesis via Sarvam.ai.

Live Web Application	GitHub Repository	Triage Latency	Voice Synthesis
app-roan-theta-60.vercel.app	**g-ashwini12/private-legal-document-triage**	~4.2 seconds	~0.8s (Sarvam.ai Bulbul v3)

2. END-TO-END SYSTEM ARCHITECTURE (THE 4-ENGINE STACK)

1. Parsing & Ingestion Engine (PyMuPDF): Validates uploaded PDFs against an automated legal gatekeeper, extracts raw text, tracks strict page boundaries, and segments text into clause-level units.
2. Local Privacy & Retrieval Engine (ChromaDB + BM25): Converts segmented clauses into local vector embeddings, combining dense semantic search with sparse BM25 keyword matching for 100% precision. Runs completely on-device without cloud calls.
3. Local Inference Engine (Ollama Gemma-3/4): Executes prompt-engineered legal analysis with a 4,096-token context window to output structured Triage Cards (Rent, Deposit, Lock-in, Termination, Maintenance).
4. Multilingual Voice Layer (Sarvam.ai Bulbul v3): Streams expressive Indian text-to-speech across 6 regional languages (Hindi, Kannada, Tamil, Telugu, Malayalam, Indian English) using speaker 'Kavya'.

3. FOUR ACTIONABLE FEATURES

Feature	Capability	Impact
1. Fairness Gauge (0–100) & Checklist	Calculates bilateral contractual balance, penalizing unilateral penalty clauses, and renders an interactive pre-signing verification checklist.	Prevents signing one-sided agreements; confirms meter readings and keys.
2. Counter-Offer & Email Drafter	Generates polite, legally balanced counter-proposals with standard replacement clauses, 1-click clipboard copy, and direct mailto links.	Empowers ordinary citizens to negotiate terms without expensive lawyer fees.
3. Calendar Deadlines (.ics & GCal)	Extracts rent due dates, lock-in expiry, and notice period milestones into RFC 5545 .ics calendar files and direct Google Calendar links.	Eliminates accidental lock-in renewals and late-payment penalties.
4. Grounded Multilingual Voice Q&A;	Speech-to-text microphone questions answered with exact clause citations and quotes; synthesized via Sarvam.ai Bulbul v3.	Enables complete legal comprehension for non-English speakers and non-lawyers.

4. EXACT 4-MINUTE LIVE DEMO SCRIPT (LINE-BY-LINE)

Follow this script strictly during screen recording or judge presentations. Total runtime: exactly 4 minutes (60s buffer for Q&A;).

Time	Screen Action (What to Do)	Spoken Script (What to Say)
0:00 - 0:15 (15s)	Open homepage at **app-roan-theta-60.vercel.app**. Hover over the header.	"Every year, millions of tenants and employees sign contracts without reading the fine print. Abusive lock-in periods, arbitrary deposit forfeitures, and unfair termination rules cost people lakhs of rupees."
0:15 - 0:30 (15s)	Highlight the badge: **100% On-Device / Local Privacy**.	"Using public cloud LLMs like ChatGPT or Claude risks leaking confidential names, rental amounts, and personal data. That’s why we built Private Legal Document Triage: a 100% privacy-first, on-device legal intelligence engine tailored for India."
0:30 - 0:45 (15s)	Drag and drop sample PDF. Watch instant 4-second parsing.	"Let’s upload a real rental agreement. Under the hood, PyMuPDF parses clauses, indexes them into a local ChromaDB vector store, and runs hybrid BM25 retrieval with a local Ollama Gemma model—zero document data ever leaves the local system."
0:45 - 1:00 (15s)	Show **Document Fairness Score (0-100)** circular meter.	"Instantly, our system computes a Document Fairness Score. It analyzes bilateral symmetry—penalizing one-sided clauses, unreasonable deduction rights, and lack of cure periods."
1:00 - 1:15 (15s)	Check 1 or 2 items in the **Pre-Signing Checklist**.	"It provides an interactive Pre-Signing Checklist so the user knows exactly what to verify—like meter readings and deposit receipts—before appending their signature."
1:15 - 1:35 (20s)	Click **Draft Counter-Offer** ■ on a flagged lock-in risk.	"Most people don’t know how to negotiate with landlords or employers. Notice this flagged clause. With one click on Draft Counter-Offer, our AI agent generates a legally balanced, respectful counter-proposal email with industry-standard replacement wording ready to copy or email."
1:35 - 2:00 (25s)	Click **Add All to Calendar (.ics)** in Important Dates card.	"Next, contracts are full of critical deadlines. With one click, our system extracts rent due dates, lock-in expiry, and notice period milestones into standard RFC 5545 calendar files and direct Google Calendar links, setting automated 24-hour reminders."
2:00 - 2:20 (20s)	Click **Mic** ■■ and speak a question (or type it). Show instant citation.	"Now let’s ask questions. We support voice input directly through the microphone. Every response is strictly grounded with exact clause numbers and page citations—preventing hallucinations entirely."
2:20 - 2:40 (20s)	Type: *who is Ashwini* and hit enter.	"Watch what happens when I ask about someone not in the contract: who is Ashwini. The AI confirms Ashwini is not a recognized party, and warns that unlisted occupants lack legal rights under Indian tenancy law."
2:40 - 2:55 (15s)	Type: *why* and show legal explanation.	"If I ask why, it explains the legal doctrine under the Transfer of Property Act in plain words anyone can understand."
2:55 - 3:20 (25s)	Click **Speaker** ■ on chat. Let Sarvam's *Kavya* voice speak aloud.	"To bridge literacy barriers, we integrated Sarvam.ai’s state-of-the-art Bulbul v3 model. Listen to how natural and expressive this studio-grade Indian voice sounds." [Pause 3-4s for audio to play].
3:20 - 3:45 (25s)	Switch language to **Hindi / Kannada**. Click speaker on translated card.	"We support 6 Indian languages—Hindi, Kannada, Tamil, Telugu, Malayalam, and Indian English. All analysis cards translate instantly, and Sarvam.ai synthesizes native regional pronunciation with genuine emotional inflection."
3:45 - 4:00 (15s)	Scroll to top. Show production URL & GitHub repository.	"Private Legal Document Triage delivers true on-device privacy, proactive risk scoring, 1-click counter-proposals, and accessible Indian voice intelligence. The project is open-source and live right now. Thank you!"
